Preface 5

I Orientation 9

00 Getting started 11

00.01 Introduction to embedded computing 12
00.02 Embedded control of mechanical systems 15
00.03 Computer architectures 17
00.04 Numeral systems 19
00.05 Binary and hexadecimal arithmetic 26
00.06 Exploring C building a sandbox 27
00.07 Exercises for Chapter 00 29
00.08 Lab Exercise 00: Getting started 32
Resource R1 High-level embedded system 36
Resource R2 Embedded computer and development environment subsystem 38
Resource R3 User interface hardware subsystem 45
Resource R4 Motor driver subsystem 47
Resource R5 Motor and mechanical apparatus subsystem 49
Resource R6 Sourcing and costs 50
Resource R7 Setting up the C Development Tool for myRIO 51
Resource R8 Suggested reading 59

II The User Interface 61

01 Computing principles and high-level io 63
01.01 Memory 64
01.02 Processing 70
01.03 A CPU programming model 71
01.04 Exercises for Chapter 01 74
01.05 Lab Exercise 01: High-level io drivers 75

02 Exploring C and mid-level io 91
02.01 A paper computer 92
02.02 Exploring C operators 93
02.03 Exploring C constants 95
02.04 Exploring C pointers 98
02.05 Exercises for Chapter 02 99
02.06 Lab Exercise 02: Keypad mid-level primitives 100

03 Digital com. and io 111
03.01 Digital communication 112
03.02 UARTs 114
03.03 Digital signals 115
03.04 Exploring C structures 117
03.05 Lab Exercise 03: Low-level character io 119

III Timing, Threads, and Finite State Machines 129

04 Finite state machine control 131
04.01 Pulse-width modulation 132
04.02 DC motor driving 133
04.03 Measuring motor velocity 137
04.04 Finite state machines 139
04.05 Exercises for Chapter 04 144
04.06 Lab Exercise 04: FSM motor control 147
Resource R9 Saving myRIO C data to a Matlab file 159
Resource R10 Copley 412 analog amplifier setup 162

05 Threads and interrupts 163
05.01 Processing threads 164
05.02 Interrupts 165
05.03 Boolean algebra on digital signals 166

PREVIEW DRAFT

05.04 Debouncing switches . . . 168
05.05 Lab Exercise 05: Introduction to interrupts . . . 169
Resource R11 Interrupt functions documentation . . . 178

IV Feedback Control of Mechanical Systems 183

06 Discrete dynamic systems 185
06.01 ADC and DAC . . . 187
06.02 Difference equations . . . 189
06.03 Discrete transfer functions . . . 190
06.04 The biquad cascade . . . 195
Resource R12 Timer interrupts . . . 196
06.05 Lab Exercise 06: Transfer function generator . . . 201
Resource R13 Discrete-time controllers . . . 207
Resource R14 Analog input and output . . . 208

07 Closed-loop control 211
07.01 DC motor velocity control . . . 212
07.02 Designing a PI controller . . . 213
07.03 Exercises for Chapter 07 . . . 214
07.04 Lab Exercise 07: DC motor velocity control . . . 215
Resource R15 A table editor for the myRIO . . . 223

08 Path planning 227
08.01 Path planning . . . 228
08.02 Designing a PID controller . . . 229
08.03 Exercises for Chapter 08 . . . 230
08.04 Lab Exercise 08: DC motor position control . . . 231
Resource R16 C function `Sramps` for position path planning . . . 239
Resource R17 Matlab function `sos2header` for converting controllers to C . . . 242

A Embedded Computing Laboratory 245

B Resources 247

C Bibliography 249
